

# Standards - Energistics

- » Using standards as a submittal format
  - Makes it more likely that operators can use commercial software
- » Using standards as a delivery format
  - Makes it easier for customers to use data
- » Using standards as a persistence (storage) format
  - Allows analytics directly on the data -> OSDU
- » Barriers to use – some solutions
  - Perceived complexity – communicate with stds body, ask for help, communicate
  - Not fit for purpose in any specific regulatory regime – use extensible standards
  - Lack of commercial products implementing – put it in contracts/policies
  - Geothermal/hydrology/gas storage missing? – work with stds authorities
